I did notice before from the application that StarKist operated at least a couple of time, and now from your graph more than that, above the 600 tons production capacity. From your 10/25 email, you indicated that these were production capacity, i.e., the maximum amount of fish the facility is able to process per day. So what are the 600 and 450 values? monthly averages? That is not what is stated in the 10/25 email.

So, yes, I am confused. Can you forward me a facility plan or something that indicates the real production capacity of the plant?

SubjectSummary of Production Numbers

Sara,

See the attached documents

I hope I have not been the source of confusion. Just to verify - all
production numbers I have given you are monthly averages of tons/day.
That
is, average daily production for each month - not maximum daily
productionon
for a single particular day.

The cannerys track this by recoding daioly production and then
dividing by
the number of production days in the month. Shutdown days where
nothing is
produced are not averaged into the numbers os zero production.

Hope this helps, let me know if I can provide anything else.

Steve
